SOIL CONSERVATION DISTRICTS

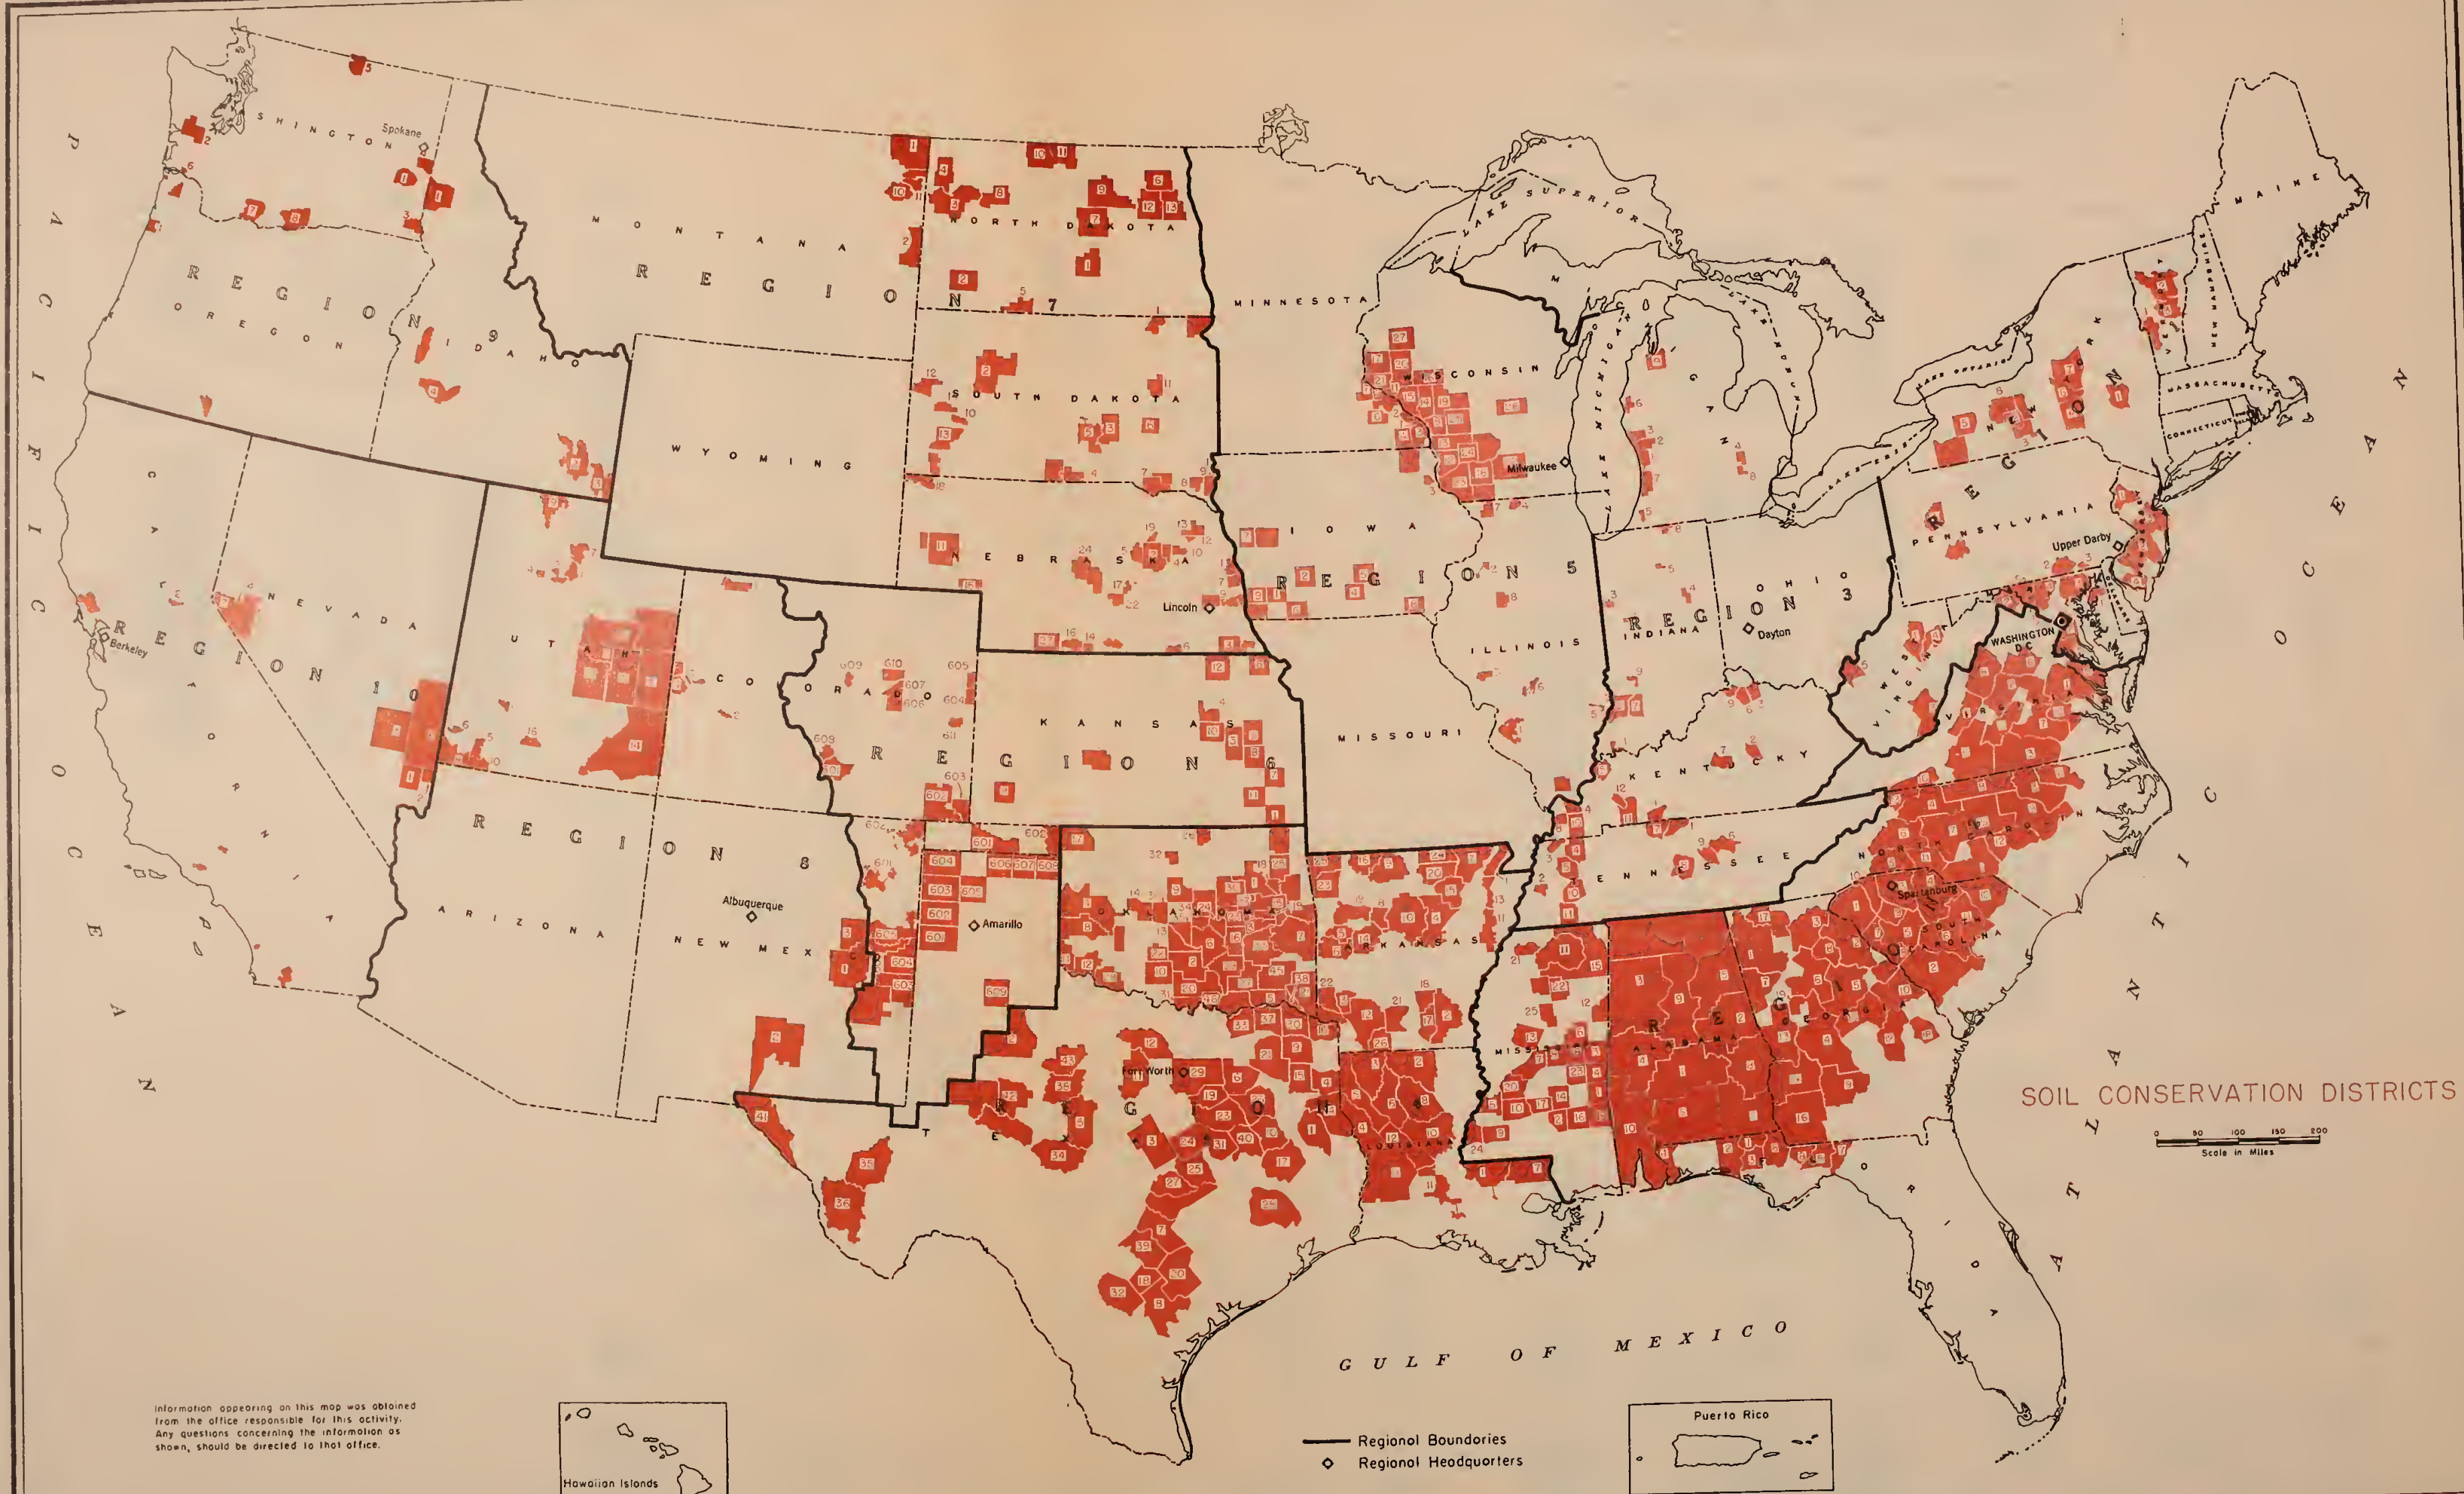

1

Under authority of state law, farmers in many states have formed local organizations for community action to conserve soil resources and promote better land use. These organizations, known as Soil Conservation Districts, are social mechanisms through which the people on the land can join in a cooperative program for the conservation of soil and soil resources.

The Soil Conservation Service projects its work onto the land largely through the instrumentality of these soil conservation districts, by assisting them in the development and execution of plans for needed land-use reforms.

APR 20 1945

DEMONSTRATION PROJECTS

Large-scale demonstration projects, averaging about 25,000 acres in size, are operated by the Service as a means of spreading conservation practices among land users. On each project, farmers are invited to cooperate with the Service in formulating and carrying out a complete program of soil conservation. Such a program involves treatment of the farm as a whole with such measures as may be adaptable to each component parcel of land.

DEMONSTRATION FARMS

MISSISSIPPI
(Continued)

Cooperating with the State Agricultural Extension Service,
the Soil Conservation Service has assisted in the establish-
ment of proper land use and conservation on the entire acreage
of 3,802 farms.

DEMONSTRATION FARMS

0 50 100 150 200
Scale in Miles

Judicious purchases of sub-marginal land not only relieve distressed people but make possible the rearrangement of ownership patterns, enlargement of operating units, and similar social and economic adjustments necessary to conservation and wise use of the land. Worn land taken out of uneconomic cultivation is developed for community pasture, forestry, recreation, wildlife, or other beneficial use.

(Projects involving the purchase, development, or management of lands by the Service under Title III of the Bankhead-Jones Farm Tenant Act. This map does not show projects for which the Service no longer has any responsibility.)

In selected semi-arid areas of the seventeen western States, the Service, in cooperation with other Departmental agencies, assists farmers and ranchers in the installation of small water facilities. Through such facilities, the opportunity for sounder use of the land is greatly broadened.

Large-scale, integrated planning and operations on a watershed basis have been major basic premises for the erosion control and land-management program in Western States. Plans are developed and surveys are made in cooperation with State and Federal agencies having jurisdiction over the administration of the public lands, following which operations are undertaken by the Service on the intermingled private lands in cooperation with the land owners.

CCC WORK AREAS

9

In 260 localities the Service is directing enrollees of the Civilian Conservation Corps in soil conservation work. The work accomplished by these camps, in cooperation with farmers, constitutes a local demonstration of the practical value of good land use and conservation.
